SURGE. TRANSIENT SPIKE. OVER VOLTAGE.

POWER RELATED FLUCTUATIONS COST NORTH AMERICAN COMPANIES MORE THAN \$80 BILLION A YEAR

You have expensive equipment you rely on every day to meet your customers' needs. Down machines cost you time, money, and resources to get back on line. With a minimal investment, you can protect your sensitive control equipment or your entire facility from surge events. Mersen's Surge-Trap® product line offers a world-class suite of surge protection products designed to protect your facility from harmful and preventable surge damage.

Most surge spikes originate from within a customer's own facility. In fact, nearly 80% of all surge problems are directly attributed to power disturbances from within the facilities own equipment.

Any facility with motors stopping and starting, light load panels being turned on and off frequently, and other potential power disturbances is at risk for damage caused by a surge spike.

Of course, surges in electrical power can also originate outside of a facility, accounting for roughly 20% of facility transient problems. These surges may be caused by utility grid switching, lightning strikes, switching of capacitor banks, and electrical accidents.

Although many transients are not predictable, damage to a facility is preventable with a proven and tested surge protective device.

WHAT TYPES OF DAMAGE CAN A SURGE CAUSE TO A FACILITY?

- **Disruptive:** A surge enters an electronic component which interprets the valid logic command. The result: system lock-up, machine malfunction leading to faulty output, or corrupted files.
- **Dissipative:** A repetitive pulsing of short duration energy. The result: Long-term machine or system degradation leading to system replacement at earlier intervals.
- **Destructive:** A high-level energy surge that immediately results in equipment failure or destruction.

WHAT DOES A VOLTAGE SURGE LOOK LIKE?

A voltage surge is a voltage level that is short in duration and can be several times greater than the system's normal operating AC RMS or DC voltage level.

WHY MERSEN? THERMALLY PROTECTED MOV (TPMOV®)

FOR SURGE PROTECTION THAT COVERS EVERY VOLTAGE NEED WITHIN YOUR FACILITY

Metal Oxide Varistors (MOVs) are the most common and efficient technology used to protect equipment against damaging voltage spikes. However, while MOVs are efficient, they also degrade over time and possibly fail catastrophically when they reach end of life. In response, UL wrote standards to prevent fire risk while using MOVs. In 2009, UL 1449 3rd Edition was published*, and it transformed the way SPD manufacturers designed and manufactured their devices.

This is when Mersen's TPMOV became essential. This Mersen-patented invention was the first fail-safe Thermally Protected MOV (TPMOV) able to pass all UL 1449 3rd Edition tests as well as even more stringent tests applied by our customers. A few years later, Mersen TPMOVs are often imitated, but there is still no match to Mersen's technology.

Almost all Mersen SPDs feature our Thermally Protected MOV (TPMOV) technology, a fail-safe surge protection solution without the need for additional upstream protection. As a result, the Surge-Trap® product line offers the lowest cost, safest, and most reliable surge protection products on the market.

	MERSEN SURGE-TRAP	TYPICAL COMPETITOR
Surge Protective Device	\$	\$
Fuse	-	\$
Fuse Holder	-	\$
Additional Wiring	-	\$
Installation Cost	\$	\$\$
Panel Footprint	-	\$
Total Product Cost	\$\$	\$\$\$\$\$\$\$

*UL 1449 4th Edition, effective March 2016, has superseded 3rd Edition, furthering the surge protection standards.

- **Thermal MOV protection (TPMOV).** Thermal protection eliminates an MOV's hazardous and destructive failure modes (thermal runaway).
- **Overvoltage is solely managed by TMOV technology.** This technology eliminates the need for additional wiring, fuse components, and costly installation time.
- **Prevention protection method.** Save MOV disconnection prior to MOV thermal runaway (as opposed to the containment method). No emission of fire, smoke, soot, or ionized gas.
- **Industry Innovation.** Mersen developed the first SPD product to pass UL 1449 3rd edition safety testing, utilizing our patented TMOV technology.
- **Highest Short-Circuit Current Rating (SCCR).** Surge-Trap products feature the highest SCCR rating available for any surge protective device, allowing for higher safety ratings and protection.
- **Isolated MOV.** Surge-Trap products provide fail-safe protection by isolating the MOV at the end of life.

Mersen offers surge protection products ranging from point-of-use protection to complete facility protection. The Surge-Trap product line represents the broadest suite of products for all your application requirements.

SURGE PROTECTION: TYPE DESIGNIGNATIONS AND LOCATION CATEGORIES

Per the National Electrical Code® (NEC) and ANSI/UL 1449, SPDs are designated as follows:

Type 1: Permanently connected, intended for installation between the secondary of the service transformer and the line side of the service disconnect overcurrent device (service equipment). Their main purpose is to protect insulation levels of the electrical system against external surges caused by lightning or utility capacitor bank switching.

Type 2: Permanently connected, intended for installation on the load side of the service disconnect overcurrent device (service equipment), including branch panel locations. Their main purpose is to protect the sensitive electronics and microprocessor-based loads against residual lightning energy, motor generated surges, and other internally generated surge events.

Type 3: Point-of-utilization SPDs installed at a minimum conductor length of 10 meters (30 feet) from the electrical service panel to the point-of-utilization. Examples include cord connected, direct plug-in, and receptacle type SPDs.

The Institute of Electrical and Electronics Engineers (IEEE) has developed three categories that every facility can be divided into, location Category A, B, and C. See IEEE Standard C62.41.1 and C62.41.2 for further reference.

Category C: Outside overhead lines and service entrance (outdoor)

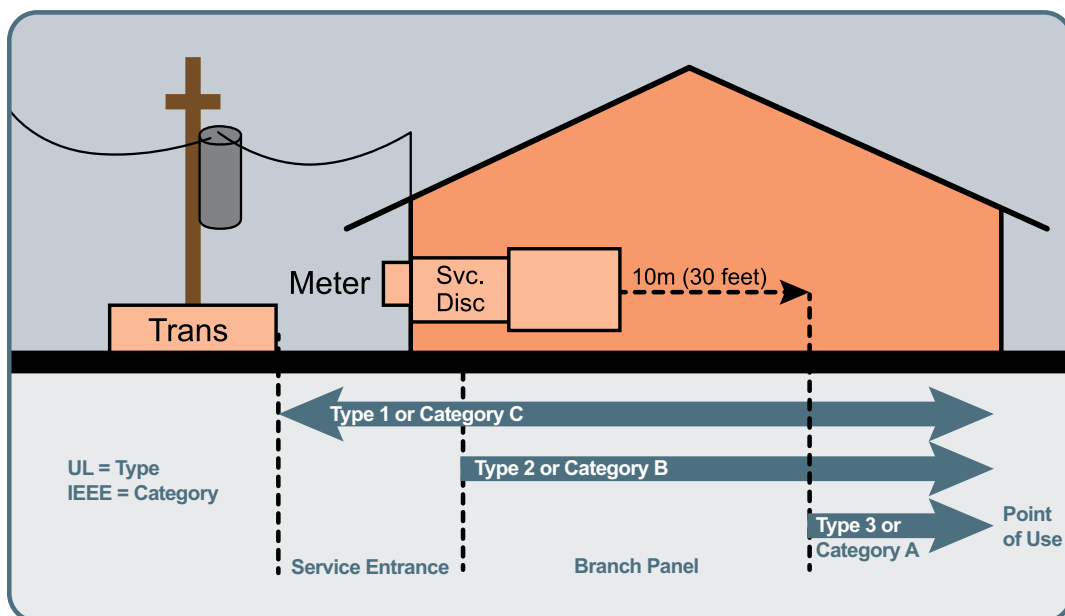

- Service drops from pole to building
- Runs between meter and panel
- Overhead lines to detached building
- Underground lines to well pump

Category B: Feeders, short branch circuits and service panels (indoor)

- Distribution panel devices
- Bus and feeder distribution
- Heavy appliance outlets with “short” connections to service entrance
- Lighting systems in large buildings

Category A: Outlets/receptacles and long branch circuits (indoor) (least severe)

- All outlets at more than 10m (30 ft) from Category B
- All outlets at more than 20m (60 ft) from Category C

MAKE SURE YOUR INSTALLATION COMPLIES WITH UL 1449 4TH EDITION STANDARDS

UL can mark SPDs with two different classifications. A product that fully complies with the UL 1449 4th Edition type categories 1, 2, or 3 is marked with a small holograph label bearing the letters SPD. It also has the UL Listing Symbol.

When a product is compliant as a component assembly of UL 1449 4th Edition, UL labels it as a Recognized Component.

- Recognized components require additional safety evaluation for the application of the product and normally this type is installed at an OEM or an electrical panel manufacturer location.
- If it is integrated into a listed panel, a UL representative will review the application to confirm it meets safety requirements.
- The UL Recognition symbol is shown as a mirror image UR.

A UL Recognized product receives a detailed list of how it is different than a listed product. The UL test report provides the “Conditions of Acceptability.” An OEM and UL field engineer requires this information to assure the SPD is applied safely.

Non-UL listed products can be misleading. Some SPD manufacturers self-test their units using their own opinion of what is important. They can state on the packaging that the SPD is UL 1449 compliant, but it’s just their opinion. The use of these products is not in compliance with NEC regulations because they are not listed. Some independent third party testing labs will test to only portions of UL 1449 at the manufacturer’s request. Look for the UL Listed logo or UL hologram logo to avoid this situation.

AN EXAMPLE OF A PRODUCT COMPLYING WITH UL 1449 4TH EDITION AND THE NEC:

If a maintenance person wanted to protect an existing machine panel against voltage surges, they might select a Mersen STXR480Y05. This is rated 480/277 volts supplied by a three-phase wye solidly grounded neutral source with not over 200kA short-circuit current. This is UL listed for a fully compliant field installation.

An OEM could select either the Mersen STXR480Y05 as above, or the Mersen STP480Y07 DIN-Rail SPD, which is UL Recognized. If the UL Recognized product is chosen, the application must meet the UL “Conditions of Acceptability.” In this example, mounting the SPD inside of the machine panel fully complies.

If there is any question about the veracity of a UL SPD status, UL has an easy verification procedure on their website at www.ul.com. At the bottom of the home page, click on the online Certifications Directory. Then enter the name of the manufacturer to verify the appropriate UL listing.

SURGE PROTECTION TERMS TO KNOW

There are many unique surge protection terms that are helpful to know. Below is a glossary of frequently used terms:

- **8/20 current impulse current:** Impulse with a virtual front time¹ of 8 μ s and a time to half-value² of 20 μ s.
- **Clamp Voltage:** The peak MOV terminal voltage measured with an applied 8/20 μ s pulse of rated impulse current.
- **Metal Oxide Varistor (MOV):** An electronic component that is commonly used to divert excessive current to the ground and/or neutral lines.
- **Maximum Continuous Operating Voltage (MCOV):** The maximum rms voltage that may be continuously applied to the SPD for each connected mode.
- **Nominal Discharge Current Rating (I_n):** Peak value of the current through the SPD, selected by the manufacturer from a list of predetermined values, having a short-circuit current wave shape of 8/20 μ s where the SPD remains functional after 15 surges.
- **Voltage Protection Rating (VPR):** A rating per UL 1449 4th Edition, signifying the rounded-up average measured limiting voltage of an SPD when the SPD is subjected to the surge produced by a 6kV, 3kA 8/20 μ s combination waveform generator.
- **Short-Circuit Current Rating (SCCR):** The suitability of an SPD for use on an AC power circuit that is capable of delivering not more than a declared rms symmetrical current at a declared voltage during a short circuit condition.
- **Surge Protective Device (SPD):** A device that contains at least one nonlinear component and is listed to limit surge voltages and divert surge current.
- **Voltage Protection Level (U_p):** Maximum voltage to be expected at the SPD terminal when subjected to the SPD's nominal discharge current (I_n).

Note 1: The front time is defined according to IEC 60060-1 to be $1.25 \times (t_{90} - t_{10})$.

Note 2: The time to half-value is defined as the time between the virtual origin and the 50% point on the tail.

NEW TO SURGE PROTECTION?

Mersen offers educational and collaborative product training annually with opportunity for hands-on experience to learn more about our products. For information on when the next training will be offered, please contact Mersen USA at 978.462.6662.

2020 NEC® CHANGES TO SURGE PROTECTION

230.67: SURGE PROTECTION FOR DWELLING UNITS

PREVIOUS CODE REQUIREMENTS:

There were no previous requirements for services supplying dwelling units to include surge protection.

NEW CODE:

230.67 Surge Protection

All services supplying dwelling units shall be provided with a surge protective device (SPD)

REASONS FOR CHANGES:

The main reasoning for this requirement is the protection of the people in these dwellings in addition to the protection of property. This requirement aims to prevent fires in residential applications as well as protect from the loss of costly electronics and appliances.

HOW TO COMPLY:

All services supplying dwelling units shall be provided with an SPD. A Type 1 or Type 2 device must be integrated into the service equipment or be located immediately adjacent to it. Type 3 SPDs, such as cord-connected surge strips, do not satisfy the new NEC 2020 Code requirement.

HELPFUL PRODUCTS:

Mersen's Surge-Trap STXH and STLC series are the ideal solutions to comply with the new requirements for dwelling units. Mersen's Surge-Trap STXR, STXP, and STXT series can provide greater protection and can also accommodate a wider range of voltage configurations to fit any dwelling application.

2017 NEC® CHANGES TO SURGE PROTECTION

620.51 (E): SURGE PROTECTION FOR EMERGENCY ELEVATOR, DUMBWAITER, ESCALATOR, MOVING WALK, PLATFORM LIFT, OR STAIRWAY CHAIRLIFT

PREVIOUS CODE REQUIREMENTS:

There were no previous requirements for surge protection in elevator type circuits.

NEW CODE:

620.51 (E) Surge Protection. (Elevators)

Where any of the disconnecting means in 620.51 has been designated as supplying an emergency system load, surge protection shall be provided.

REASONS FOR CHANGES:

From 2013 to 2014 NFPA sponsored a survey to determine the damaging effects of voltage surges in various applications. 24% of responders to the survey reported damage to elevator circuits from voltage surges. Surge Protection is not solely designed to protect against lightning but also surges that are created by other equipment within a facility.

HOW TO COMPLY:

Using type 1 SPDs either internally or externally ensure that emergency elevator circuits are protected from damaging surges.

HELPFUL PRODUCTS:

Mersen has full line of Type 1-listed SPDs for all applications. The Mersen models are designed to protect service entrances, panels, and point-of-use equipment.

2017 NEC® CHANGES TO SURGE PROTECTION

645.18: SURGE PROTECTION FOR CRITICAL OPERATIONS DATA SYSTEMS

PREVIOUS CODE REQUIREMENTS:

There were no previous requirements for surge protection in critical operations data systems. However, the previous code does require surge protection at a distribution level for critical operations per article 708.20 (D).

NEW CODE:

645.18 Surge Protection for Critical Operations Data Systems.

Surge protection shall be provided for critical operations data systems.

REASONS FOR CHANGES:

While Article 708.20 (D) does require surge protection it is only at the high level of power distributions for critical operations. For Surge Protection to be most effective, a cascading protection scheme should be used through an

entire system. This added requirement ensures that protection will be installed as close as possible to critical operations data systems and provide multi-level protection in conjunction with 708.20 (D).

HOW TO COMPLY:

Use only a Type 1 SPD for general field additions to ensure they are self-protected. Type 1 component assemblies can be used but need to be installed in an enclosure.

HELPFUL PRODUCTS:

Mersen has a large variety of type 1 surge protective devices to cover most rating requirements for field additions. Mersen also has several type 1 component assemblies for installation in control panels.

2017 NEC® CHANGES TO SURGE PROTECTION

670.6: SURGE PROTECTION FOR INDUSTRIAL MACHINERY

PREVIOUS CODE REQUIREMENTS:

There were no previous requirements for surge protection for industrial machinery.

NEW CODE:

670.6 Surge Protection

Industrial machinery with safety interlock circuits shall have surge protection installed.

REASONS FOR CHANGES:

Industrial machinery safety interlocks are required per NFPA 79 primarily to protect operators against serious injury or possible death. A 2013 and 2014 survey of facility managers commissioned by NFPA found that a significant amount of responses (26%) reported damage to safety interlocks from surge events.

HOW TO COMPLY:

Select listed SPDs with manufacturer instructions that include minimum wire sizing.

HELPFUL PRODUCTS:

Mersen has a large variety of Type 1 surge protective devices to cover most rating requirements for field additions. Mersen also has several Type 1 component assemblies for installation in control panels.

2017 NEC® CHANGES TO SURGE PROTECTION

695.15: SURGE PROTECTION FOR FIRE PUMP CONTROLLERS

PREVIOUS CODE REQUIREMENTS:

There were no previous requirements for surge protection for a fire pump controller.

NEW CODE:

695.15 Surge Protection

A listed surge protection device shall be installed in or on the fire pump controller.

REASONS FOR CHANGES:

In 2014 surge protection requirements were added for emergency systems at a distribution level for switchboards and panelboards. 2017 expands on this further requiring another level of protection directly at the fire pump controller. NFPA survey results from 2013-2014 showed that 12% of participants reported damage to fire pump controllers from surge issues.

HOW TO COMPLY:

Use only a Type 1 SPD for general field additions to ensure they are self-protected. Type 1 component assemblies can be used but need to be installed in an enclosure.

HELPFUL PRODUCTS:

Mersen has a large variety of Type 1 surge protective devices to cover most rating requirements for field additions. Mersen also has several Type 1 component assemblies for installation in control panels.

MERSEN SURGE-TRAP® CORE OFFERING FOR TOTAL SURGE PROTECTION

Any facility with motors stopping and starting, light load panels being turned on and off frequently, and other potential power disturbances is at risk for damage caused by a surge spike. Turn to Mersen Surge-Trap for surge protection that covers every voltage need within your facility.

SURGE-TRAP® STMT23 SERIES

Mersen's Surge Trap STMT Series features low voltage surge protective devices suitable for both AC and DC voltage applications. UL 1449 4th Edition approved, this series is ideal for the protection of controls, power supplies, communication systems, and other sensitive equipment. With a slim design, these DIN-rail mount SPDs are ideal for limited space applications. The series is suitable for operating voltages of 12-230 VAC and 24-365 VDC and offers an optional dry contact feature for remote monitoring.

FEATURES AND BENEFITS:

- Maximum discharge current (8/20 μ s): 6kA – 20kA
- Nominal discharge current (8/20 μ s): 3kA – 10kA
- Combined voltage pulse (1.2/50 μ s): 10kV, 6kV
- Single phase networks
- Un: 12V, 24V, 48V, 60V, 120V, 230V
- Typically for use also in the corresponding DC voltages
- DIN-rail mountable, monobloc format
- Visual (LED) and remote end of life indicators
- Power status (LED) indicator
- Space saving "slim" format
- Back-up fuse IEC: 63A gG; UL: 30A CC (ATMR30)

APPLICATIONS

- Industry and automation controls
- Commercial and residential installations
- Telecom & IT & Data Centers
- LED outdoor lighting
- Water treatment

SURGE PROTECTIVE DEVICE

LOW VOLTAGE SPD FOR AC/DC VOLTAGE CONTROL AND POWER APPLICATIONS

RATINGS:

SURGE-TRAP® STP SERIES

Surge-Trap® Pluggable Surge Protective Device (SPD) is a no-fuse, fail-safe surge suppressor featuring Mersen's patented TPMOV® technology inside. UL 1449 4th Edition approved, it is DIN-rail mountable featuring a fail-safe self-protected design, visual indicator, and a small footprint. A remote indicator option provides status to critical control circuitry. The Surge-Trap Pluggable SPD has a high short circuit rating and a thermally protected MOV, which eliminates the need for additional overcurrent protection devices.

NEW AND IMPROVED 75KA RATING

Mersen's DIN-Rail Pluggable SPD is one of a kind - the combination of a robust 75kA surge capacity along with no requirement of backup fusing creates an offering unique to the market. Add this to the reliability and safety of Mersen's patented TPMOV technology and you have a truly superior product.

FEATURES AND BENEFITS:

- Easy installation or retrofit
- DIN-rail mountable
- Fail-safe, self-protected design
- Remote indicator
- Visual indicator
- IP20 finger-safe design
- Small footprint
- No additional overcurrent protection devices required
- Easy to replace modules
- 2-year warranty

SURGE PROTECTIVE DEVICE

DIN-RAIL PLUGGABLE SPD FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

RATINGS:

SURGE-TRAP® ST SERIES

Surge-Trap® Modular Surge Protective Device (SPD) is a no-fuse, fail-safe surge suppressor featuring Mersen's patented TPMOV® technology inside. UL 1449 4th Edition approved, it is DIN-rail mountable featuring a fail-safe self-protected design, visual indicator, and a small footprint. A remote indicator option provides status to critical control circuitry. The Surge-Trap Modular SPD has a high short circuit rating and a thermally protected MOV, which eliminates the need for additional overcurrent protection devices.

FEATURES AND BENEFITS:

- Easy installation or retrofit
- DIN-rail mountable
- Fail-safe, self-protected design
- Remote indicator (optional)
- Visual indicator
- IP20 finger-safe design
- Small footprint
- No additional overcurrent protection devices required
- 2-year warranty

SURGE PROTECTIVE DEVICE

DIN-RAIL MODULAR SPD FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

RATINGS:

- **Volts (U_n):** 120-690VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase and per mode):** 50kA
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 Component Assembly SPD, File E210793
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- RoHS Compliant

SURGE-TRAP® ST SERIES

SURGE-TRAP® STPT2-PV SERIES FOR PHOTOVOLTAIC

SURGE PROTECTIVE DEVICE

DIN-RAIL PLUGGABLE SPD FOR PHOTOVOLTAIC APPLICATIONS

STPT2 40 PV is the series of devices that provide advanced overvoltage protection to photovoltaic systems by utilizing Mersen's optimized dynamic thermal disconnection system, which does not require additional overcurrent protection (back-up fuse) due to its high short-circuit withstand rating. These surge protective devices are suitable for all PV applications: large-scale, rooftop, and self-consumption (off-grid) DC installations.

RATINGS:

- **Volts (U_{cpv}):** 600-1500VDC
- **Nominal Discharge Current Rating (I_n):** 10-20kA
- **Surge Capacity (per phase and per mode):** 40kA
- **Short-Circuit Current Rating (SCCR):** 50-100kA

It is estimated that the average home has \$15,000 worth of equipment that can be damaged by electrical surges. Mersen's Surge-Trap® STLC surge protective device adds a critical layer of surge protection for your entire home. From your family room to your office, and your kitchen, your entire electrical system is protected. This simple whole house solution is installed directly in your electrical panel and has flexibility to fit in a variety of different load center manufacturers and models. The STLC Series is designed with Mersen's TPMOV® to ensure superior safety and reliability, it is a UL 1449 4th Edition Type 1 SPD, and satisfies the new 2020 NEC Article 230.67 requirement for surge protection for residential dwellings.

FEATURES AND BENEFITS:

- Designed with industry leading Mersen TPMOV® Technology
- Installs directly into load center bus bar, utilizing any (two) open adjacent breaker slots
- Versatility: fits into most residential load centers with 1" spacings (see page 2 for compatibility list)
- LED status indicator (ON = Good, OFF = Replace)
- 2 Modes of Protection (L-N, L-L)
- 3-year manufacturer's warranty, plus up to \$25k connected equipment warranty (see warranty document for details)

SURGE-TRAP® STXH SERIES

The most compact of the STX series offering, the Surge-Trap® Type 1 STXH meets requirements for UL1449 4th Edition and is suitable for any 120/240VAC split phase application. The STXH Series SPD features TPMOV® technology inside making it the safest product available in its category. Its compact size, performance, and reliability are especially ideal for HVAC applications and direct mounting to air condition disconnect switches.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology
- Compact footprint designed to mate with AC Disconnect Switches
- LED status indicator (ON = Good, OFF = Replace)
- NEMA 4X enclosure for outdoor or indoor use
- Fits 1/2" knockouts with 18" leads for easy installation
- For use in ANSI/UL Type 1 or 2 SPD installations
- 3 Modes of Protection (L-N, L-L)
- 3-year warranty

SURGE-TRAP® STXR SERIES

The most popular range in the STX series offering, the Surge-Trap® Type 1 STXR meets requirements for UL1449 4th Edition and is ideal for the replacement of obsolete surge arrestors. The STXR Series SPDs feature TPMOV® technology inside, making them the safest product available. With a small, compact design and line or load installation flexibility, the STXR series is the perfect fit for branch panel and/or individual equipment protection.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology
- LED status indicator (ON = Good, OFF = Replace)
- NEMA 4X enclosure for outdoor or indoor use
- Fits 3/4" knockouts with 3' leads for easy installation
- Optional mounting bracket for surface mount applications
- Optional audible alarm and remote dry contacts
- For use in ANSI/UL Type 1 or 2 SPD installations
- Up to 10 modes of Protection (L-N, L-L, L-G optional, N-G optional)
- 5-year warranty

Bracket Mount Option

SURGE-TRAP® STXP SERIES

The Surge-Trap® Type 1 STXP Series offers advanced performance and features over the STXR series including higher surge capacity and phase LED status indicators. The STXP meets requirements for UL1449 4th Edition and has been designed for additional mounting flexibility including mounting feet and flush-mount capability. The STXP features TPMOV® technology inside making it the safest product available. Installation can be done on the line or load side of a panel. The STXP is the perfect fit from service entrance all the way down to an important machine specific control panel.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology (internally fused)
- Enhanced 100kA surge capacity for longer life and higher single impulse withstand
- LED status indicator (ON = Good, OFF = Replace)
- LED phase loss indicators (ON = Operational, OFF = Maintenance Required)
- NEMA 4X enclosure for outdoor or indoor use
- Mounting hub and mounting feet for installation flexibility
- Pre-wired with 3' leads for easy installation
- Optional flush-mount kit for in-wall installation
- Optional audible alarm and remote dry contacts
- For use in ANSI/UL Type 1 or 2 SPD installations
- Up to 10 Modes of Protection (L-N, L-L, L-G, N-G)
- 10-year warranty

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

RATINGS:

- **Volts (U_n):** 120-600VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase):** 100kA
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 SPD, File E210793
- CSA C22.2, Type 1 SPD
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- UL96A Lightning Protection
- RoHS Compliant

SURGE-TRAP® STXT SERIES

The most advanced of the STX series, the Surge-Trap® Type 1 STXT Series comes standard with EMI/RFI Filtering and surge capacities up to 200kA. The STXT features TPMOV® technology inside, making it the safest product available. With line or load side installation flexibility, this unit is a great fit from the service entrance all the way down to each distribution and/or branch panel.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology (internally fused)
- Premium 200kA surge capacity for longer life and higher single impulse withstand
- Includes EMI/RFI filter for cleaner attenuation
- LED status indicator (ON = Good, OFF = Replace)
- LED phase loss indicators (ON = Operational, OFF = Maintenance Required)
- NEMA 4X enclosure for outdoor or indoor use
- Mounting hub and mounting feet for installation flexibility
- Optional audible alarm and remote dry contacts
- For use in ANSI/UL Type 1 or 2 SPD installations
- Up to 10 Modes of Protection (L-N, L-L, L-G, N-G)
- 10-year warranty

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

SURGE-TRAP® STZ SERIES SPD

The Mersen flagship for facility-wide protection, The Surge-Trap® Type 1 STZ Series features surge capacities up to 450kA designed with Mersen's industry leading TPMOV® technology inside making it the safest and most reliable product on the market. Options include surge counter, through-the-door disconnect switch, audible alarm, dry contact, and EMI/RFI filtering. This external SPD can be installed on the line or load side of the service entrance.

FEATURES AND BENEFITS:

- Type 1 SPD for service entrance and facility-wide protection
- Ideal for new construction bid projects and specification as well as existing facility retrofit
- Designed with the industry leading Mersen TPMOV® Technology (internally fused)
- Standard features include EMI/RFI filter, surge counter with reset, audible alarm and dry contacts with silence
- Field replaceable SPD module
- SPD module can be rotated 90 degrees depending on desired cable entry location
- Available with or without disconnect switch
- For use in ANSI/UL Type 1 or 2 SPD installations
- Up to 10 Modes of Protection (L-N, L-L, L-G, N-G)
- 15-year warranty

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

TPMOV® (THERMALLY PROTECTED MOV) TECHNOLOGY

TPMOV AND TPMOV7 SERIES

Mersen's patented TPMOV technology eliminates common failure modes that occur in the field with standard metal oxide varistors. Internally the TPMOV is comprised of a voltage clamping device and a disconnecting apparatus that monitors the status of the metal oxide disk, making the TPMOV a fail-safe device. In the event of an overvoltage breakdown, the metal oxide disc is securely disconnected from the system power by an arc shield. Upon failure, the TPMOV is also equipped with a visual pin indicator as well as a normally open micro-switch, providing remote indication if applicable.

TPMOV7: 50% more surge capacity, Same footprint

The TPMOV7 is rated for **75kA - 8/20µs peak surge current** and is available for maximum continuous operating voltages (MCOV) from 150V to 320VAC.

FEATURES AND BENEFITS:

- Industry-leading, patented TPMOV technology available in 50kA and 75kA surge capacities
- Consistent footprint with 25–40mm MOVs
- Built-in visual/remote indication optional
- Wave solderable
- No additional overcurrent protective device (fuses) required

SURGE PROTECTIVE DEVICE

COMPONENT SPD FOR OEM DESIGN AND BUILD

RATINGS:

- **Volts (U_n):** 150-550VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity:** 50kA, 75kA
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 Component Assembly SPD, File E210793
- RoHS Compliant

25TPMOV SERIES TPMOV® (THERMALLY PROTECTED MOV) TECHNOLOGY

30% SMALLER FOOTPRINT - SAME RELIABLE TPMOV TECHNOLOGY

Mersen's patented TPMOV technology eliminates common failure modes that occur in the field with standard metal oxide varistors. Internally the TPMOV is comprised of a voltage clamping device and a disconnecting apparatus that monitors the status of the metal oxide disc making the TPMOV a fail-safe device. Upon failure the TPMOV is also equipped with a visual pin indicator as well as a normally open micro-switch providing remote indication, if applicable. Mersen's 25TPMOV is rated for 25kA - 8/20µs peak surge current and is available for maximum continuous operating voltages (MCOV) from 150V to 320VAC.

FEATURES AND BENEFITS:

- Industry leading, patented, TPMOV® Technology
- Now available in a standard 25mm MOV footprint
- Upstream overcurrent protection not required
- Optional built-in end-of-life indication
- Type 1 SPD allows for use in all types of SPD applications

SURGE PROTECTIVE DEVICE
