

SYSTEMATIC TECHNOLOGY

Premium jacket provides oil and sunlight resistance

Drain wire ensures shield continuity

Class K stranding provides superior flexibility

Separator tape over the shield allows for easy removal of the jacket

Dual foil and braid shield for best EMC results

XLPE insulation provides the ideal electrical properties for VFD applications

**LUTZE DRIVEFLEX® CABLES
FOR VFD AND MOTOR APPLICATIONS**

	A106 Series	Small OD design for tight spaces or conduit installation		A107 Series	Small OD design for tight spaces or conduit installation, with one shielded pair
	A216 Series	Excellent electrical performance especially suited for long cable runs		A217 Series	Excellent electrical performance especially suited for long cable runs, with one shielded pair
	A220 Series	Symmetrical ground design helps to reduce shaft voltage and bearing currents, especially in higher HP applications		A218 Series	Excellent electrical performance especially suited for long cable runs, with two shielded pairs
<p>Online DRIVEFLEX® HP Cable Selection tool: www.driveflex.com/hp-configurator</p>				A244 Series	Easily add one or two twisted pair cables for brake or control signals for any VFD application

WHY LUTZE DRIVEFLEX®?

- The most flexible VFD Cable in its class for the easiest handling and installation
- Engineered for optimal VFD performance, motor efficiency and noise reduction
- Rugged design for long life span in harsh industrial environments
- UL Listed for use in a wide variety of application areas
- Visit www.driveflex.com for more information
